

## Spot Lights

More than 100 incandescent and halogen spot lights are on display in our showroom. Both low voltage and 240 volt, in a range of colours styles and sizes.

240 volt halogen spot lights are available as singles, 2s, 3s or 4 light fittings. Some suppliers have 6 and 8 lights.

Low voltage wire or rod systems are on display with either surface mount or remote transformers.

Incandescent spot lights are still popular and available as bars or plates. The lamps used for spot lights are of 3 main types

- Low voltage halogen lamps, that provide a whiter crisper light and last up to 6000 hours.
- 240 volt halogen lamps, that provide a slightly warmer coloured light and last up to 2000 hours.
- Incandescent lamps, usually R80 reflector lamps that provide a warm coloured light and last up to 1000 hours.

We can advise you of the best type of lamp and fitting to suit you.
